

WHAT IS WATER SOFTENING?

Water softening is a technique that serves the removal of the ions that cause the water to be hard, in most cases calcium and magnesium ions. Iron ions may also be removed during softening. The best way to soften water is to use a water softener unit and connect it directly to the water supply.

Lancaster's water softening systems deliver advanced technology and enhanced performance to water conditioning. Our systems remove unwanted hardness and minerals from your household water supply. State-of-the-art control valves, high-performance mineral tanks loaded with resin that adheres to the highest quality standards will guarantee long lasting solutions for years to come.

BENEFITS

Softer, cleaner, smoother skin and hair

Reduces carbon footprint

Maintain water appliance life

Reduce scale buildup

Softer and cleaner clothes

Cleaner and shinier silverware and tableware

Reduce soap and formula use

Reduce water use
